VRM Token Whitepaper

0xD38B3A2aEfef1AF63090faa17dF272D3365EB365

Summary

VRM seeks to fix a problem in the Goerli Ethereum Test Network. Developers are hoarding görETH, resulting in a widespread shortage of the coin, according to data from websites that distribute tokens. As a result, developers must pay a premium to access what are intended to be freely distributed coins. Without görETH, devs cannot experiment on the test network, posing a threat to innovation on the Ethereum blockchain. (Source: The Defiant)

Solution

Our solution is Valorem (VRM). Valorem is a token on the Göerli network, with a maximum supply of 10,000,000,000,000 VRM. With the shortage of görETH sweeping the markets, we encourage developers to use Uniswap to swap their görETH for Valorem. This will preserve the value of your görETH, and as more developers contribute görETH to the project, the value will rise. When developers need to access their görETH, they can easily swap their Valorem back to görETH! This is a community oriented project, as the value of Valorem will rise if more developers swap their görETH for it.
